

DAY TWO work progress

Fast Toilet Snaking

02 Website and Metrics

Website Overview

Fast Snaking Services was strategically designed to modernize the perception of residential toilet snaking and unclogging services. Unlike traditional plumbing companies that often rely on outdated branding and overly technical communication, the website was built to feel approachable, fast, modern, and easy to understand for everyday homeowners and renters.

The overall visual direction combines clean layouts, bold typography, mobile-friendly design, and social-media-ready branding to create a service identity that feels trustworthy while still being memorable. The platform focuses heavily on speed, convenience, and accessibility — allowing users to immediately understand the service offered without unnecessary complexity.

Website Contents

The website content of Fast Snaking Services was designed to create a simple, modern, and user-friendly experience that clearly communicates the company's services while encouraging fast customer interaction. The overall content structure focuses on clarity, accessibility, and convenience by presenting information in an organized and easy-to-understand manner. Each page was strategically developed to support customer trust, improve navigation, and strengthen the brand's identity as a fast-response residential service provider. The content also supports digital marketing efforts by using concise messaging, mobile-friendly communication, and conversion-focused elements that align with modern social media and online advertising strategies.

- Landing Page
- Pricing Page
- About Us Page
- Clients Page (Invitation)
- Mission Page
- Location with Geo-tag
- Process Page
- Call to Action Button

Website User Experience

Logo Usage Guidelines Maintain consistent spacing around the logo at all times. Never stretch, skew, rotate, or distort the logo. Always use high contrast between the logo and the background. Preferred usage is on the mint background (#b6e8e6) or white. The coral accent color (#f05d62) should remain the primary highlight color. Avoid placing the logo over highly detailed backgrounds. For social media, maintain enough padding to keep the logo visible even in profile circles.

Main Message of the Website

The main message was designed to immediately communicate trust, simplicity, and urgency to potential customers. By emphasizing a ₱125 flat rate, the website removes uncertainty around pricing, which is one of the biggest barriers in service-based industries. This straightforward pricing approach helps position the business as transparent and customer-friendly. Adding the “money back” guarantee reinforces confidence in service quality, assuring users that they are not taking any financial risk. Overall, the message was structured to quickly capture attention, build credibility, and encourage immediate action by combining affordability, clarity, and assurance in a single, easy-to-understand statement.

Website Constrictions

The website is hosted on Vercel, which provides fast and reliable deployment, but it also introduces certain platform limitations depending on the plan used. These limitations mainly affect visitor capacity, serverless function usage, and bandwidth, which may impact performance during high traffic spikes.

Because of these constraints, the website is optimized for efficiency and lightweight performance to ensure smooth loading even under moderate traffic conditions. Assets are minimized, unnecessary scripts are reduced, and caching strategies are considered to help maintain stability.

In the future, we will need to upgrade to AWS hosting if we reach a 1000 visitor per month.

Website Design

The website design was created with a strong focus on clarity, speed, and conversion. Since the service is time-sensitive and problem-driven, the layout prioritizes immediate understanding of what the company offers and how to contact them without unnecessary navigation.

A simple and direct structure is used to reduce friction, guiding users quickly from problem awareness to booking a service. Key information such as pricing, service process, and contact options are placed in highly visible sections to ensure users do not need to search for answers.

The visual style leans toward modern, clean design with minimal distractions, helping the content stand out and reinforcing professionalism and reliability. Strategic use of call-to-action buttons throughout the page encourages immediate engagement, while consistent spacing and hierarchy improve readability across devices.

A loading animation was included in the website design to improve user experience and create a more polished, professional impression during initial page load. Instead of showing a blank or static screen, the animation provides visual feedback that the system is actively loading, which helps reduce perceived waiting time.

Call to Action Reminder

Call-to-action reminders were added throughout the website to consistently guide users toward taking the next step, whether that is booking a service, making an inquiry, or contacting support. Since the service is problem-driven and often needed urgently, these reminders ensure that users are never left unsure of what to do after reading the content.

Instead of placing a single CTA at the end of the page, prompts are strategically repeated in key sections such as service explanations, pricing, and process pages. This approach captures users at different stages of decision-making, increasing the likelihood of conversion.

The wording is kept direct and action-oriented to reduce hesitation and make the next step obvious. Overall, the CTA reminders are designed to shorten the decision process, improve user flow, and turn interest into immediate action.

Button is placed on the right side of the screen always to make it accessible to potential customers.

**THIS LOGIC IS SUPPORTED
BY DATA !!!**

Placing a persistent call-to-action button on the right side of the screen is based on established user behavior patterns and UI research showing that accessibility and visibility directly impact conversion rates.

Most users scan websites in an F-shaped or Z-shaped reading pattern, meaning they tend to focus on the top and right areas of the screen after initial content scanning. Keeping a CTA fixed on the right ensures it stays within this natural visual flow, making it easier to notice without interrupting reading.

I also made links to the facebook page for more details / if they wanna message the page first.

Facebook Metrics - day one

The Facebook page performance shows an initial stage of awareness-building, with a total of 164 views and 44 unique viewers, indicating that the content is successfully reaching non-followers and gaining early exposure. This is a positive sign that the page is being discovered organically, even without a strong follower base yet.

However, engagement metrics such as follows (0), content interactions (0), and conversations started (0) indicate that while users are seeing the content, they are not yet taking further action. This suggests that the current content is effective for visibility but still needs stronger conversion-focused strategies such as more compelling calls-to-action, engaging creatives, or value-driven posts.

The 9 Facebook visits also show that a small portion of viewers are interested enough to explore the page further; which is a strong early indicator of potential interest.

Overall, the metrics reflect an early-stage marketing presence focused on reach and awareness. The next improvement phase should prioritize engagement and conversion strategies to turn passive viewers into active customers and followers.
